Heavy Equipment Operation – Picture This

What's wrong in this picture? Almost all construction projects have heavy equipment and machinery used to complete tasks and various purposes. Heavy equipment like excavators and pavers help construction workers get more work done in less time. However, while heavy equipment helps get more work done faster, it can also be hazardous if not used properly. You and your crew will need to evaluate your operating environment and other work conditions to ensure your heavy equipment is operated correctly. Heavy equipment should only be operated by a certified professional who has proper training and experience for the particular equipment along with management oversight.
