Inspection Checklist

Prevent workplace incidents, injuries and illnesses with our Inspection Checklist. Health and safety managers can use this checklist to identify hazards due to:

- Floors leading to slips and trips;
- Improper labeling of controlled substances;
- Obstructed walking areas;
- Inadequate first aid provisions; and more!

Use this checklist when conducting your regular safety inspections. Go over every aspect of your workplace to identify possible hazards.

Add or delete items as necessary for your particular workplace. If during your inspection you notice any other risks to workers that are not listed here, write down those risks on a blank page and include it with this checklist.
