

News You Can Use: Beryllium Standard Delay Update

OSHA Issues Direct Final Rule Revising Beryllium Standard for General Industry; Delays Enforcement of Certain Provisions

On May 4, OSHA issued a direct final rule clarifying aspects of the beryllium standard for general industry as it applies to processes, operations, and areas where workers may be exposed to materials containing less than 0.1% beryllium by weight. The direct final rule will go into effect on July 4 unless OSHA receives significant adverse comments by June 4. For details, see the news release.

OSHA also announced that it will begin enforcing certain requirements of the beryllium final rule, including the permissible exposure limits in the general industry, construction, and shipyard standards; and the exposure assessment, respiratory protection, medical surveillance, and medical removal provisions in the general industry standard.

The agency will delay enforcement of other ancillary provisions for general industry until June 25, 2018. The Agency plans to issue a proposal to further extend this compliance date for the ancillary provisions to Dec. 12, 2018.
