Picture This! Texting While Driving Hits a New Low

Everyone knows how dangerous it is to text while behind the wheel of a moving car. This guy has upped the ante by taking his hands off the handlebars of his motorbike while texting! This biker is traveling at between 50 and 60 miles per hour (80 to 95 km/h), meaning that he is covering at least 73 feet or 22 meters every second with his eyes off the road. (Naval Safety Center)
