## Roofing Safety (Multiple-Unit Roof Coverings) Infographic

Choose the PROPER shoes for walking on roofs:

- Choose lighter boots with non-slip soles.
- Wear puncture resistant soles.
- Seek out specialty "roofer shoes" with nonslip soles, moderate stiffness, a tight fit, rear motion control, and front end flexibility.

Choose the PROPER shoes for walking on flat, narrow planks:

- Choose high-cut, above ankle, work shoes or safety boots—they provide the most balance of any shoe type.
- Avoid low-cut work shoes that are well padded—they will reduce your ability to control your balance.
- Avoid athletic shoes on planks.

Walking the right way is no substitute for fall protection.
