What Are The Costs of a Lack of Safety Training – Special Report

This report examines the high costs of insufficient safety training, highlighting both direct expenses, like workers' compensation, and hidden, indirect costs that impact productivity and morale. It presents compelling data on the financial impact, noting that workplace injuries cost employers nearly $1 billion weekly. SafetyNow underscores the significant ROI of a robust safety program, with trained companies experiencing fewer incidents and lower insurance premiums. The report also addresses common gaps in leadership understanding of safety ROI, emphasizing the need for preventive, continuous training. Ultimately, it advocates for comprehensive safety programs as a critical investment in both employee welfare and organizational stability.
