Nobody's immune to back pain

Back pain is a leading safety problem, second only to common colds as the reason people miss work

Anyone who has to move heavy objects, work in awkward positions, hold one position for a long time or perform certain tasks at a fast pace can get hurt.

These tips will help protect your back while lifting:

- Don't bend over the object you're lifting.
 Bend your knees, squatting in front of the object to reach it.
- Lift slowly and carefully, using your leg and arm muscles to lift, not pulling with your back.
- Keep your back straight and your head up.
- Keep the object as close to your body as possible, gripping with the whole hand (there's virtually no strength in fingertips).
- Keep abdominal muscles tight while making the lift, and avoid twisting. Turn the foot and point it in the direction of eventual movement.

Many work situations can put you in an awkward position which could distort the spine, put unbalanced pressure on discs and strain arm, leg or back tissues.

Here are suggestions for avoiding injury while working in awkward positions:

 Raise bins and containers off the floor and/or tilt them to reduce bending and over-reaching

- When working overhead, stand on a steady, adjustable platform. Keep back posture in its natural curve.
- In confined spaces, plan your work and reduce clutter that will further confine.
 Have adequate lighting
- Don't hold an awkward position too long.
 Pause often to stretch and straighten.
- When leaning forward, support the weight of your upper body on your free hand and arm. This relieves pressure on your lower back.
- Position yourself as close as possible to the job, avoid over-reaching. When on ladders or scaffolding, use tools with longer handles.
- Place your work below the shoulder and above the knees.
- Push, rather than pull loads.

If an item is too heavy, bulky or high for one person, a team should move it. If still too hazardous, then use conveyor belts, hand trucks, mechanical lifts, hoists or dollies.

Don't store items to be handled on the floor. Whenever possible, keep them between your belt line and shoulders.

To reduce risk of lower back stress and strain, you can get training in lifting techniques, physical conditioning or stretching. Perhaps you can also redesign the job and save your back.

QUIZ

1.	Back	pain	is a	minor	safety	problem	and
	few p	eople	e mi	ss work	becaus	se of it.	

- o True
- o False
- 2. Bending over the object you're lifting is the proper way to begin a lift.
 - o True
 - o False
- 3. You should use your leg and arm muscles to lift.
 - o True
 - o False
- 4. When lifting, keep your _____ straight and your head up.
- 5. Your fingertips contribute much of the strength involved in gripping and lifting.
 - o True
 - o False
- 6. Keeping abdominal muscles tight while making the lift is a good idea.
 - o True
 - False

- 7. When on ladders or scaffolding, you should use tools with longer handles.
 - o True
 - o False
- 8. You are usually safer to push, rather than pull loads.
 - o True
 - False
- 9. If an item is too heavy, bulky or high for one person, a _____ should move it.
- 10. If you will be handling stored items at a later date, it's better not to store them on the floor.
 - o True
 - o False

Refer to the "Tips For Safety Talks!" for ideas on planning this safety meeting. Read through the article ahead of time to help you with your presentation. Add further questions to those we have provided at the end of this talk.

- Are there areas or tasks in your workplace that put workers in awkward working positions, such as working in confined spaces or tasks that involve overhead lifting?
- Discuss strategies on how to avoid back injury while working in these areas or performing these tasks
- Does your company have lift support tools available for workers, such as mechanical lifts or handcarts?
- Demonstrate the proper way to use, stack or move these items.
- Does your company have a lift team? Make sure your workers know how to request the assistance of the lift team.

AFTER THE TALK- CHECKLIST

PROVIDED FOLLOW-UP TO WORKERS THAT DID

POORLY ON THE QUIZ

NAME: _____

DATE: _____

OBSERVED WORKERS

TASK(S): _____

DATE: _____

REFRESHER TRAINING

TOPIC(S):

DATE: _____

OTHER (DESCRIBE): _____

MEETING DATE: ______LOCATION: _____

NOTES

ANSWERS:

- 1. False
- 2. False
- 3. True
- 4. Back
- 5. False

- 6. True
- 7. True
- 8. True
- 9. Team
- 10. true
